

## 54ACT/74ACT399

### Quad 2-Port Register

#### General Description

The 'ACT399 is the logical equivalent of a quad 2-input multiplexer feeding into four edge-triggered flip-flops. A common Select input determines which of the two 4-bit words is accepted. The selected data enters the flip-flop on the rising edge of the clock.

#### Features

- Select inputs from two data sources
- Fully positive edge-triggered operation
- Outputs source/sink 24 mA
- 'ACT399 has TTL-compatible inputs

**Ordering Code:** See Section 8

| Pin Names                        | Description               |
|----------------------------------|---------------------------|
| S                                | Common Select Input       |
| CP                               | Clock Pulse Input         |
| I <sub>0a</sub> -I <sub>0d</sub> | Data Inputs from Source 0 |
| I <sub>1a</sub> -I <sub>1d</sub> | Data Inputs from Source 1 |
| Q <sub>a</sub> -Q <sub>d</sub>   | Register True Outputs     |

## Functional Description

The 'ACT399 is a high-speed quad 2-port register. It selects four bits of data from either of two sources (Ports) under control of a common Select input (S). The selected data is transferred to a 4-bit output register synchronous with the LOW-to-HIGH transition of the Clock input (CP). The 4-bit D-type output register is fully edge-triggered. The Data inputs ( $I_{0x}$ ,  $I_{1x}$ ) and Select input (S) must be stable only a setup time prior to and hold time after the LOW-to-HIGH transition of the Clock input for predictable operation.

Function Table

| Inputs |       |       |    | Outputs |           |
|--------|-------|-------|----|---------|-----------|
| S      | $I_0$ | $I_1$ | CP | Q       | $\bar{Q}$ |
| L      | L     | X     | —  | L       | H         |
| L      | H     | X     | —  | H       | L         |
| H      | X     | L     | —  | L       | H         |
| H      | X     | H     | —  | H       | L         |

H = HIGH Voltage Level

L = LOW Voltage Level

X = Immaterial

— = LOW-to-HIGH Clock Transition

## Logic Diagram

| $V_O = -0.5V$                                                          | -20 mA                   |  |
| $V_O = V_{CC} + 0.5V$                                                  | +20 mA                   |  |
| DC Output Voltage ( $V_O$ )                                            | -0.5V to $V_{CC} + 0.5V$ |  |
| DC Output Source or Sink Current ( $I_O$ )                             | $\pm 50$ mA              |  |
| DC $V_{CC}$ or Ground Current per Output Pin ( $I_{CC}$ or $I_{GND}$ ) | $\pm 50$ mA              |  |
| Storage Temperature ( $T_{STG}$ )                                      | -65°C to +150°C          |  |
| Junction Temperature ( $T_J$ )                                         |                          |  |
| CDIP                                                                   | +175°C                   |  |
| PDIP                                                                   | +140°C                   |  |

**Note 1:** Absolute maximum ratings are those values beyond which damage to the device may occur. The databook specifications should be met, without exception, to ensure that the system design is reliable over its power supply, temperature, and output/input loading variables. National does not recommend operation of FACT™ circuits outside databook specifications.

## Recommended Operating Conditions
