National Semiconductor

9322/DM9322 Quad 2-Line to 1-Line Data Selectors/Multiplexers

General Description

These data selectors/multiplexers contain inverters and drivers to supply full on-chip data selection to the four output gates. A separate strobe input is provided. A 4-bit word is selected from one of two sources and is routed to the four outputs. True data is presented at the outputs.

Features

- Pin-for-pin with popular DM54157/74157
- Buffered inputs and outputs

Applications

- Expand any data input point
- Multiplex dual-data buses
- Generate four functions of two variables (one variable is common)
- Source programmable counters
- Alternate Military/Aerospace device (9322) is available. Contact a National Semiconductor Sales Office/Distributor for specifications.

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
Military	−55°C to +125°C
Commercial	0°C to +70°C
Storage Temperature Range	−65°C to +150°C

Note: *The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.*
