1) Regulation is measured at constant junction temperature, using pulse testing at a low duty cycle. Changes in output voltage due to heating effects are covered under thermal regulation specifications. Load regulation is measured from the bottom of the package for the TO-3 and TO-66 packages, at the junction of the wide and narrow portion of the output lead for the TO-220 package, and  $1/8$ " below the base of the package on the output pin of the TO-257 package.

2) Test Conditions unless otherwise stated:  $V_{IN} - V_{OUT} = 5V$  ,  $T_J = 25^\circ C$  ,  $I_{OUT} = 0.5A$  ,  $I_{MAX} = 1.5A$ .  
 $P_{MAX} = 10W$  for SMD1, 20W for all other package styles.  
 $V_{MAX} = 40V$  for standard series ,  $60V$  for HV series.
