- Regulation is measured at constant junction temperature, using pulse testing at a low duty cycle. Changes in output voltage due to heating effects are covered under thermal regulation specifications. Load regulation is measured from the bottom of the package for the TO-3 package and on the back of the heat tab for the TO-218, TO-220 and TO-257 packages.
- Test Conditions unless otherwise stated: $V_{IN} - V_{OUT} = 5V$, $T_J = 25^\circ C$, $I_{OUT} = 1.5A$. Although power dissipation is internally limited, these specifications apply for dissipations of 30W for the TO-3, TO-218 and TO-257 packages, and 25W for the TO-220 package; $I_{MAX} = 3A$.
