1) Regulation is measured at constant junction temperature, using pulse testing at a low duty cycle. Changes in output voltage due to heating effects are covered under thermal regulation specifications. Load regulation is measured from the bottom of the package for the TO-3 package.

2) Test Conditions unless otherwise stated: $V_{IN} - V_{OUT} = 5V$, $T_J = 25^\circ C$, $I_{OUT} = 2.5A$.
 Although power dissipation is internally limited, these specifications apply for dissipations of 50W and $I_{MAX} = 5A$.
