S54182-B,F,W • N74182-B, F

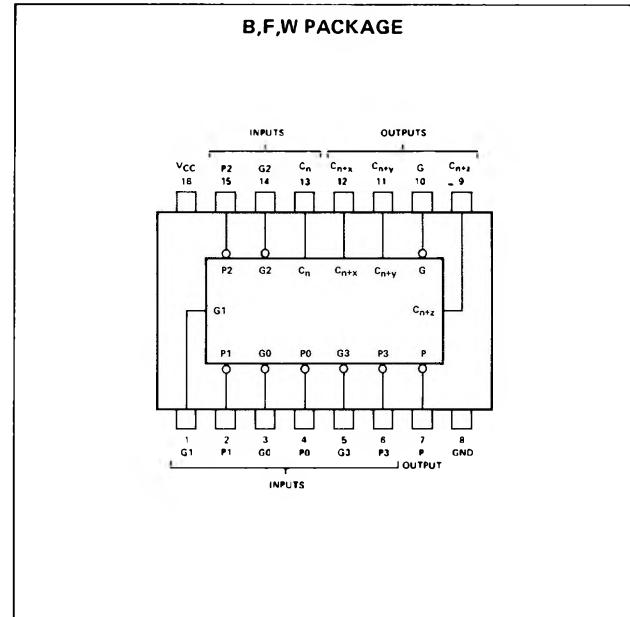

DIGITAL 54/74 TTL SERIES

## DESCRIPTION

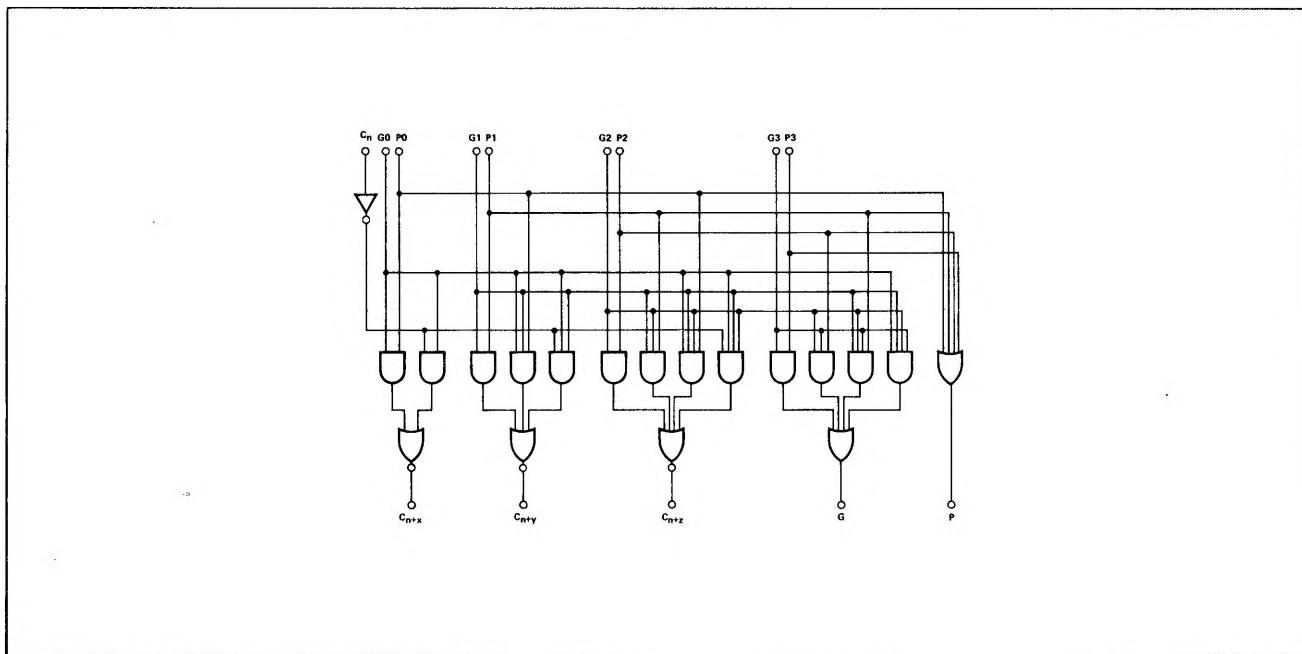

The S54182, N74182 is a high-speed, look-ahead carry generator capable of anticipating a carry across four binary adders or group of adders. It is cascadable to perform full look-ahead across n-bit adders, with only 13 nanoseconds delay for each level of look-ahead. Carry, generate-carry, and propagate-carry functions are provided as enumerated in the pin designation table above.

The S54182 or N74182, when used in conjunction with the S54181 or N74181 arithmetic logic unit (ALU), provides full high-speed carry look-ahead capability for up to n-bit words. Each S54182/N74182 generates the look-ahead (anticipated carry) across a group of four ALUs and, in addition, other carry look-ahead circuits may be employed to anticipate carry across sections of four look-ahead packages up to n-bits. Applications data for the S54181/N74181 illustrates cascading of S54182/N74182 circuits to perform multi-level look-ahead.
