## 2.5V/3.3V SiGe Selectable Differential Clock and Data D Flip-Flop/Clock Divider with Reset and OLS\*

The NBSG53A is a multi-function differential D flip-flop (DFF) or fixed divide by two (DIV/2) clock generator. This is a part of the GigaComm™ family of high performance Silicon Germanium products. A strappable control pin is provided to select between the two functions. The device is housed in a low profile 4x4 mm 16-pin Flip-Chip BGA (FCBGA) or a 3x3 mm 16 pin QFN package.

The NBSG53A is a device with data, clock, OLS\*, reset, and select inputs. Differential inputs incorporate internal  $50\ \Omega$  termination resistors and accept NECL (Negative ECL), PECL (Positive ECL), LVCMS/LVTTL, CML, or LVDS. The OLS\* input is used to program the peak-to-peak output amplitude between 0 and 800 mV in five discrete steps. The RESET and SELECT inputs are single-ended and can be driven with either LVECL or LVCMS/LVTTL input levels.

Data is transferred to the outputs on the positive edge of the clock. The differential clock inputs of the NBSG53A allow the device to also be used as a negative edge triggered device.

N/A	-	EP		The Exposed Pad (EP) and the QFN-16 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is not electrically connected to the die but may be electrically and thermally connected to V <sub>EE</sub> on the PC board.

- All V<sub>CC</sub> and V<sub>EE</sub> pins must be externally connected to Power Supply to guarantee proper operation. The thermally exposed pad (EP) on package bottom (see case drawing) must be attached to a heat-sinking conduit.
- In the differential configuration when the input termination pins (VTD, VTD̄, VTCLK, VTCLK̄) are connected to a common termination voltage, and if no signal is applied then the device will be susceptible to self-oscillation.
- When an output level of 400 mV is desired and V<sub>CC</sub> - V<sub>EE</sub> > 3.0 V, 2KΩ resistor should be connected from OLS pin to V<sub>EE</sub>.
