### Linear Products

#### DESCRIPTION

The NE/SE5514 family of quad operational amplifiers sets new standards in bipolar quad amplifier performance. The amplifiers feature low input bias current and low offset voltages. Pinout is identical to LM324/LM348 which facilitates direct product substitution for improved system performance. Output characteristics are similar to a  $\mu A741$  with improved slew and drive capability.

#### FEATURES

- Low input bias current:  $< \pm 3nA$
- Low input offset current:  $< \pm 3nA$
- Low input offset voltage:  $< 1mV$
- Low supply current:  $1.5mA/A$
- $1V/\mu s$  slew rate
- High input impedance:  $100M\Omega$
- High common-mode impedance:  $10G\Omega$
- Internal compensation for unity gain
- $600\Omega$  drive capability ( $7V_{RMS}$ )

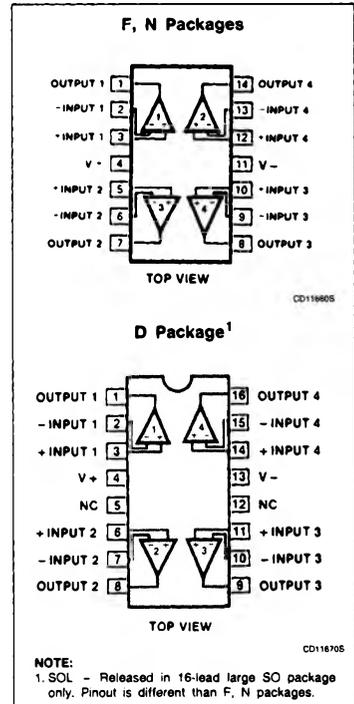

#### APPLICATIONS

- AC amplifiers
