$I_{FM(surge)}$ Peak Surge Current, One Cycle, at (or below) 100°C (See Note 2)	22						A
$T_{Ambient}$ Operating Ambient Temperature Range	-30 to 100			-35 to 100			°C
$T_{stg}$ Storage Temperature Range	-30 to 100			-35 to 100			°C
Lead Temperature 1/2 Inch from Case for 5 Seconds (See Note 4)	240						°C

- NOTES 1. These values may be applied continuously under single-phase, 60-c/s, half-sine-wave operation with resistive load. Above 25°C derate  $I_O$  according to Figure 1.
2. These values apply for 60-c/s half sine waves when the device is operating at (or below) rated values of peak reverse voltage and average rectified forward current. Surge may be repeated after the device has returned to original thermal equilibrium.
3. Derate linearly to 4 A at 100°C.
4. It is recommended that a heat sink, such as long-nose pliers, be applied between the point of soldering and the rectifier body.

\*indicates JEDEC registered data.

<sup>†</sup>the ambient temperature is measured at a point 2 inches below the device. Natural air cooling shall be used.

- NOTES: -
1. POLARITY DENOTED BY CATHODE BAND.
