

# MOS FIELD EFFECT TRANSISTOR 2SK3059

# SWITCHING N-CHANNEL POWER MOS FET INDUSTRIAL USE

#### **DESCRIPTION**

The 2SK3059 is N-Channel MOS Field Effect Transistor designed for high current switching applications.

#### **ORDERING INFORMATION**

PART NUMBER	PACKAGE
2SK3059	Isolated TO-220

#### **FEATURES**

· Low on-state resistance

RDS(on)1 = 13 m $\Omega$  MAX. (VGS = 10 V, ID = 25 A)

 $R_{DS(on)2} = 20 \text{ m}\Omega$  MAX. (Vgs = 4.0 V, ID = 25 A)

- Low Ciss: Ciss = 2400 pF TYP.
- Built-in gate protection diode
- Isolated TO-220 package

(Isolated TO-220)

#### ABSOLUTE MAXIMUM RATINGS ( $T_A = 25$ °C)

Drain to Source Voltage (Vgs = 0 V)	VDSS	60	V
Gate to Source Voltage (Vps = 0 V)	VGSS(AC)	±20	V
Gate to Source Voltage (VDS = 0 V)	VGSS(DC)	+20, -10	V
Drain Current (DC) (Tc = 25°C)

**Remark** The diode connected between the gate and source of the transistor serves as a protector against ESD. When this device actually used, an additional protection circuit is externally required if a voltage exceeding the rated voltage may be applied to this device.

- The information in this document is current as of April, 2001. The information is subject to change
  without notice. For actual design-in, refer to the latest publications of NEC's data sheets or data
  books, etc., for the most up-to-date specifications of NEC semiconductor products. Not all products
  and/or types are available in every country. Please check with an NEC sales representative for
  availability and additional information.
- No part of this document may be copied or reproduced in any form or by any means without prior written consent of NEC. NEC assumes no responsibility for any errors that may appear in this document.
- NEC does not assume any liability for infringement of patents, copyrights or other intellectual property rights of
  third parties by or arising from the use of NEC semiconductor products listed in this document or any other
  liability arising from the use of such products. No license, express, implied or otherwise, is granted under any
  patents, copyrights or other intellectual property rights of NEC or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative
  purposes in semiconductor product operation and application examples. The incorporation of these
  circuits, software and information in the design of customer's equipment shall be done under the full
  responsibility of customer. NEC assumes no responsibility for any losses incurred by customers or third
  parties arising from the use of these circuits, software and information.
- While NEC endeavours to enhance the quality, reliability and safety of NEC semiconductor products, customers
  agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize
  risks of damage to property or injury (including death) to persons arising from defects in NEC
  semiconductor products, customers must incorporate sufficient safety measures in their design, such as
  redundancy, fire-containment, and anti-failure features.
- NEC semiconductor products are classified into the following three quality grades:
  - "Standard", "Special" and "Specific". The "Specific" quality grade applies only to semiconductor products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of a semiconductor product depend on its quality grade, as indicated below. Customers must check the quality grade of each semiconductor product before using it in a particular application.
  - "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
  - "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
  - "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC semiconductor products is "Standard" unless otherwise expressly specified in NEC's data sheets or data books, etc. If customers wish to use NEC semiconductor products in applications not intended by NEC, they must contact an NEC sales representative in advance to determine NEC's willingness to support a given application.

(Note)

- (1) "NEC" as used in this statement means NEC Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC semiconductor products" means any semiconductor product developed or manufactured by or for NEC (as defined above).
